

NETFLIX ANALYSIS — SUMMARY

This dashboard looks at **9,821 Netflix titles** in **44 languages** and **20 genres**. It uses **ratings** and **popularity** to understand how movies perform.

KEY FINDINGS:

1. English movies are the most common, but not the highest rated.

About **77% of all movies are in English**. However, English movies are not always the best. **Animation (6.9)** and **War (7.0)** have higher average ratings than **Drama (6.74)** and **Action (6.26)**, even though there are fewer movies in these genres.

2. Popular movies are not always good movies.

Some movies are very popular but do not have high ratings. For example, **Spider-Man: No Way Home** is the most popular movie and also has a high rating of **8.3**. But movies like **The Requin** (rating **4.6**) and **Batman & Robin** (rating **4.3**) are also popular even though people rated them much lower. This shows that being popular does not always mean a movie is good.

3. Some great movies are not well known.

Some movies have very high ratings but are not very popular. For example, **Franco Escamilla: Por La Anecdota** has a **9.2** rating, and **Dilwale Dulhania Le Jayenge** has an **8.7** rating, but both have low popularity. This means many people have not discovered these good movies yet.

4. More movies in a genre does not mean better quality.

Drama, Action, and Comedy have the most movies on Netflix. However, they are not the highest-rated genres. **Animation** and **War** have fewer movies but better average ratings. This shows that having more movies in a genre does not always mean that genre is better.
